

Dear PCK Parents,

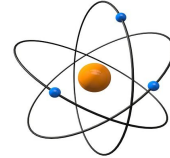

Through your continued generosity during the 2018 Annual Giving campaign, we hope to be able to complete our elementary science vision and present our students with an exciting, fully functioning science lab by next August.

One of the most exciting elements to our Elementary Lab is the portable planetarium dome and projector. Please check out the video on The Parents of PCK Facebook page to see first hand what an asset this will be to our students!

Additional elements include aquariums and terrariums, hydroponics systems, insects and animals to fully immerse our students in the foundations of science. Plus specific resources to explore renewable energy, solar power and simple machines.

Children can comprehend science easier when they can collaborate, design and see experiments being performed, explore the materials and equipment used, and see the relationship between action and reaction. Hands-on lab activities are both an important and fun way to experience science, offering life skills such as critical thinking and problem solving.

Developing an interest in science as early as kindergarten is imperative to raising our next generation of scientists, doctors, engineers and other high technology jobs!

Please consider donating to The Annual Giving Campaign and helping us reach our goal to be the premier K-8 school in Douglas County.

Thank you for your continued support and generosity,

The Foundation at PCK
